

Bryan Avery, C.M.

Airport Manager, A.E.

North Bay Jack Garland Airport

Bryan Avery is the Airport Manager of the North Bay Jack Garland Airport.

A former glider pilot and member of the Canadian Armed Forces cadet youth program he's always had an interest in aviation, but overtime it's been focused to infrastructure operations.

As a graduate of both Georgian College's Aviation Management Institute and Embry Riddle Aeronautical University he has taken a keen interest in the diverse challenges and opportunities in airport operations; most notably in regional airports.

Having worked at regional airports and onsite business for over 15 years Bryan has developed diverse experience in refueling, service and property development, regulatory compliance, and the many facets that make up airport operations. Over this time, and working with AMCO, he continues to share experiences, challenges, and successes that are relevant for others in order to prepare and advance the industry.

Having years of experience working at the North Bay Airport, Bryan has been hands-on with many ad-hoc, diversionary, or otherwise irregular operations that have made use of the airport's long runway and infrastructure capacity; from world leader visits, aircraft testing programs, weather events, mechanical, medical, military, and many more.

Outside of work Bryan enjoys travelling and ideally long distance self-supported hiking through remote areas; though his wife Sam doesn't enjoy that Bryan often books travel routes that has them both visiting the greatest number of airports possible along the way; seeing first-hand how others are meeting the needs of their communities and getting ideas to hopefully bring back home.
